

# AI-Based Voice-Controlled Desktop Assistant

Author: Himanshu Rastogi

---

## Overview

---

This project is a voice-controlled desktop assistant developed using Python. The assistant can recognize voice commands and perform various desktop tasks such as opening websites, telling the current time, and searching Wikipedia.

## Features

---

- Voice Recognition
- Text-to-Speech Response
- Open YouTube and Google
- Tell Current Time
- Wikipedia Search
- Simple and User-Friendly Interface

## Technologies Used

---

Python

SpeechRecognition

pytsx3

Wikipedia API

## How to Run

---

### 1. Install required libraries:

```
pip install -r requirements.txt
```

### 2. Run the program:

```
python main.py
```

## Future Improvements

---

- Add weather updates
- Add AI chatbot integration
- Add system control commands
- Add GUI interface
